A Top Money Manager Shares Words of Wisdom

BY LOUIS NAVELLIER
Editor, *Emerging Growth, Quantum Growth, Blue Chip Growth,* and *Global Growth*

What should investors be asking in 2017?
When will sales and earnings finally improve? The analyst community is expecting that the S&P 500's earnings in 2017 will be up 12.7%, led by energy, which will have easy year over year comparisons. However, the US dollar is now at a 14-year high and that will pinch the sales and earnings of the commodity stocks and multi-internationals in the S&P 500, since commodities are priced in US dollars and approximately 50% of the S&P 500's sales are outside of the US. Domestic companies have a big advantage over multi-international companies, which is why small-cap stocks are now strong.

What are the biggest investing mistakes and how do you avoid them?
Not trimming risk as stocks become more volatile. As any stock moves higher, it typically becomes more volatile and needs to be trimmed a bit as risk increases. I recommend 60% in conservative stocks, 30% in moderately aggressive stocks and only 10% in aggressive stocks. My conservative, moderately aggressive and aggressive risk ratings are also included on my FREE Dividend Grader & Stock Grader databases.

What are three pieces of advice you would give to a Millennial to help them become a successful investor?
Don't do ETFs. Read the Stanford & UCLA academic study that pointed out that ETFs are more expensive to buy and sell than stocks, since they all too often trade at premiums and discounts to NAV. I know this first hand, since I shut down my smart-beta ETF in December, since in 2016 it traded at an average premium of 1.37% and a discount of 3.74% according to Morningstar. Furthermore, a bunch of big ETFs with names like iShares Dividend, Equal Weight S&P 500, and Vanguard Equal Weight all traded at 30%+ intraday discounts during a mini "flash crash" back on August 24, 2015, when NYSE circuit breakers stopped trading in almost 1,300 stocks. Investors have no idea how they are being "fleeced" by the premium and discount problem haunting ETFs. Many RoboAdvisor programs are just the latest excuse to "churn" ETFs, so anonymous trading groups affiliated with ETF firms/specialists can fleece clients with excessive trading and wide bid/ask spreads.

Transparency, diversification, and low-cost access to practically any market, sector, or asset class make exchange traded funds highly attractive, viable solutions for investors and traders alike, yet the fact remains that most investors notoriously chase performance in overhyped and overvalued ETFs! What Should Investors Be Asking Themselves in 2017?

BY JAMES STACK
Editor, *InvesTech Market Analyst*

There are three key questions:

1) What is my tolerance for risk? This is not a young bull market, we are in our eighth year of one of the longest bull markets in history and that should guide your strategy.

2) Where can I find the safer stocks, that is, where can I find good investments that will also help protect me in the fallout that inevitably will happen when this bull market comes to an end?

3) Where do I watch for bear market warning flags?

We're at the point in the energy price cycle where fortunes will be made with savvy buys, but also lost by poor timing and bad stock picking. Now he's ready to cash in on the next phase of the cycle with his battle-tested, high-yielding MLP buys.

Even some high-rated dividends ETFs are risky for naive dividend investors. In other words, it is a minefield out there in the dividend world.

Louis Navellier, editor of *Blue Chip Growth, Quantum Growth, Global Growth,* and *Emerging Growth*, will explain how his FREE Dividend Grader grades stocks on their dividend persistence and dividend growth. Based on exhaustive research, Dividend Grader identifies the safest, least-volatile dividend stocks that also have capital appreciation potential. So, if you're interested in insuring a safer and more prosperous retirement, you cannot afford to miss this session.
